PROJECTS

Non-Interactive PSI from Functional Encryption, Master's Thesis ↗

Advisor: Prof. Prabhanjan Ananth

Santa Barbara, CA

Jan 2023 - May 2023

- Created a non-interactive version of the widely-used and celebrated private set intersection problem.
- Leveraged functional encryption to encode sets in a manner that decryption reveals just the intersection.
- Worked on public- and private-key functional encryption schemes with adaptive simulation security.
- Implemented the schemes using various open-source cryptographic libraries and 128-bit AES scheme as PRF.

Blockchains in Business Networks, Undergraduate Thesis

Advisor: Prof. Shweta Agrawal

Chennai, India

Jan 2018 - May 2018

- Prototyped a permissioned blockchain-based business network that stores CRUD activity as a transaction.
- Worked with Hyperledger Fabric and Hyperledger Composer to model the business network.
- Developed REST APIs for the network using AngularJS and NodeJS with data stored in a LAMP stack.
- Tested the prototype business network with data of 10,000+ students in IIT Madras in various scenarios.

Block Cipher Design and Cryptanalysis

Advisor: Prof. Chester Rebeiro

Chennai, India

Jan 2017 - Apr 2017

- Designed and implemented a novel 128-bit Feistel cipher with 7 rounds and 4 s-boxes called 'Descartes'.
- Designed four 16x4 compression s-boxes, which obey non-linearity. Each s-box uses a 96-bit sub-key.
- Performed linear, differential cryptanalyses and a timing attack based on the size of the 128-bit key.
